### Job Description

2050 Partners is seeking to add a bright and highly organized Consultant to focus on energy efficiency portfolio and program management. As a Consultant for 2050 Partners, you will manage all aspects of projects that help our clients achieve goals related to energy efficiency, demand response, and broader decarbonization strategies. You will manage 2050 Partners' day-to-day coordination oversight of the State of Hawaii's third-party energy efficiency portfolio administrator and EM&V consultant on behalf of the Hawaii Public Utilities Commission. In addition, you will provide project management for California energy efficiency incentive programs and codes & standards programs. We are looking for someone, preferably in the Pacific Time Zone and ideally in the San Francisco Bay Area, who is passionate about delivering exceptional client services, dedicated to our mission of meeting state, federal, and international carbon mitigation goals, and enthusiastic about growing with our consulting firm. Responsibilities include:

- Project initiation, planning, execution, monitoring, controlling, and closing
- Client engagement, subcontractor management, and external stakeholder engagement
- Technical research related to energy-using equipment and building systems
- Participation in energy policy and regulation development, specifically including codes and standards
- Management or support for distributed energy resources programs
- Report development and presentation and business development and proposal writing
- Internal strategic planning and operations support.

### Desired Qualifications

- Undergraduate and/or graduate degree(s), engineering degree a plus
- 5 to 10 years total experience (work and graduate program, if applicable)
- 3 or more years of experience with energy efficiency program design and management and/or energy efficiency program evaluation required
- Project management track record, including initiation, planning, execution, monitoring, controlling, and closing projects
- Outstanding analytical and conceptual skills
- Highest ethical standards
- Experience in the distributed energy resource industry, including energy efficiency, demand response, solar PV, energy storage, and/or electric vehicles is a plus
- Strong attention to detail and tracking
- Ability to collaborate well with people at all levels within an organization
- Great initiative, creativity and curiosity; work well both on your own and as part of team
- Strong practical implementation skills
- Excellent communication and presentation skills
- Ability to learn and apply skills across interdisciplinary fields, including technology assessments, engineering, economics, statistics, and policy
- Confidence, enthusiasm, and humility
- Willingness for occasional travel
- Desire and ability to work remotely

2050 Partners is a professional services consulting firm committed to providing strategy, innovation, execution, and knowledge sharing for our clients and partners. Our team focuses on energy efficiency, distributed energy resources, water efficiency, clean transportation, and broader decarbonization strategies. We have broad experience providing strategic and analytical advice relating to codes and standards programs, demand-side management incentive programs, emerging technology programs, and policy development. 2050 Partners is a California Benefits Corporation and operates in an environmentally and socially responsible manner. 2050 Partners offers full benefits (health, dental, vision), a 401(k) retirement plan, and a flexible and fun work environment.
