

Job Description

2050 Partners is seeking to add a bright and motivated Consultant to join our team. In this role, you will manage all aspects of consulting projects that help our clients achieve goals related to energy efficiency, demand response, and broader decarbonization strategies. We are looking for someone who is passionate about delivering exceptional client services, dedicated to our mission of meeting state, federal, and international carbon mitigation goals, and enthusiastic about growing with our dynamic consulting firm.

Responsibilities may include:

- Project initiation, planning, execution, monitoring, controlling, and closing
- Technical research related to energy-using equipment and building systems
- Client engagement, subcontractor management, and external stakeholder engagement
- Report development and presentation
- Participation in energy policy and regulation development, specifically including codes and standards (a focus)
- Management or support for distributed energy resources programs
- Business development and proposal writing
- Internal strategic planning and operations support

Desired Qualifications

- Undergraduate and/or graduate engineering degree(s) required, preferably in mechanical engineering
- 5+ years relevant experience (work and graduate program, if applicable)
- Outstanding analytical and conceptual skills
- Highest ethical standards
- Project management track record, including initiation, planning, execution, monitoring, controlling, and closing projects
- Experience or exposure to energy policy, including building codes and appliance standards
- Experience in the distributed energy resource industry, including energy efficiency, demand response, solar PV, energy storage, and/or electric vehicles
- Experience in business development and proposal writing
- Ability to collaborate well with people at all levels within an organization
- Great initiative, creativity and curiosity; work well both on your own and as part of team
- Strong practical implementation skills
- Excellent communication and presentation skills
- Ability to learn and apply skills across interdisciplinary fields, including technology assessments, engineering, economics, statistics, and policy
- Attention to detail
- Confidence, enthusiasm, and humility
- Willingness for occasional travel
- Ability to work remotely

2050 Partners is a professional services consulting firm committed to providing strategy, innovation, execution, and knowledge sharing for our clients and partners. Our team focuses on energy efficiency, distributed energy resources, water efficiency, clean transportation, and broader decarbonization strategies. We have broad experience providing strategic and analytical advice relating to codes and standards programs, demand-side management incentive programs, emerging technology programs, and policy development. 2050 Partners is a California Benefits Corporation and operates in an environmentally and socially responsible manner. 2050 Partners offers full benefits (health, dental, vision), a 401(k) retirement plan, and a flexible and fun work environment.
